Material Safety Data Sheets (MSDS) are collected at the point of entry into the department. They are filed alphabetically in Fulmer 23, the chemistry department storeroom. Additional copies are available in Fulmer 318.

Copies of the MSDS’s may be obtained by contacting the storeroom.

A list of the available MSDS’s is maintained at HTTP://www.wsu.edu/~gjohnso2. This list is updated periodically.

If the storeroom is closed, and you need a MSDS, as a first step search the Internet through www.vwrsp.com or www.alfa.com.

The investigator using the chemical should anticipate the need for a MSDS and request one before the chemical is used. The investigator and the Principle Investigator should review the MSDS and any special procedures for handling acutely dangerous materials before using the material in the laboratory.
