

These rankings are based on the results of the *Genotype and Environment Study (G&E)* conducted by the USDA Western Wheat Quality Laboratory and the WSU Wheat Quality Program, including relevant breeding nurseries.

End-use quality determinations were based on results from grain, milling and product quality tests.

The quality scores presented here reflect a minimum of three years of data in the G&E study, using a reference variety for each class.

The scores are reviewed yearly as new data becomes available, and are subject to change. Varieties not listed have not been tested or have less than three years of data. For complete results, please visit the website: www.wsu.edu/~wwql/php/index.php

Variations in states' rankings may occur because different and appropriate groups of trial sites were used to calculate the quality scores for each state. Changes in lists may result from differences in environmental conditions.

Washington Wheat Commission (WWC)

The G and E Study is financially supported by the WWC. For more information, contact the WWC office.
